

Luvos™ - capsules and powder

Discover why Luvos™ is a vital part of maintaining a healthy internal balance

Nature's alternative to chemical antacids. Luvos' restorative properties have been known for more than two thousand years. The ancient Greeks made use of this "gift of nature" and Europeans rediscovered this natural remedy and mineral supplement in the 19th century. Today, Luvos is mined from mineral rich ice age deposits in Germany and brought to you in two safe and convenient forms - as capsules and in powder form.

Luvos "Healing Earth" has tremendous power to absorb and neutralize stomach acids quickly. Luvos also is well known for its effective absorption of bacteria, nicotine, caffeine and other harmful impurities. A high degree of pulverization gives Luvos its high internal surface, resulting in its excellent absorptive properties. Luvos reduces bloating, soothes chronic gastritis due to hyperacidity and works to calm a sensitive stomach.

Luvos™ is entirely made from essential minerals and trace elements, without any artificial additives. It truly is "Nature's Sponge" for cleansing your digestive system.

LUVOS is suitable for both internal and external uses.

External Uses: applied as a moist paste, Luvos powder can be used to create a warming sensation on the skin or as a cooling agent in a localized area. External uses include: for minor skin problems (oily skin and acne); to clean pathogens and other unwanted substances; for inflamed joint injuries, arthritis and other musculoskeletal problems; for venous inflammations and venous obstruction; to accelerate wound healing; and for skin diseases e.g. Acne vulgaris, Rosacea (face rose), psoriasis (psoriasis), itchiness, insect bites, burn, sunburn, Herpes labialis, Herpes zoster and Stomatitis aphthosa. Luvos powder can also be used externally as a poultice for internal organs.

Internal Uses of Luvos

- Absorbs excess gastric acid
- Absorbs bile acids
- Absorbs painful gases
- Absorbs harmful intestinal bacteria
- Absorbs fats and fatty acids
- Normalizes intestinal micronial flora
- Prevents constipation
- Is an excellent source of trace minerals (e.g. calcium, silica, iron, potassium, magnesium and zinc)
